

REBCO's Competidor II

The dawn of a new era . . .
when quality and budget meet!

In today's competitive marketplace, an alternative entrance is emerging to answer the demand for a high quality yet inexpensive door. That entrance is REBCO's Competidor II.

Don't be fooled by its low price and aesthetically pleasing narrow stile design. Behind its attractive facade, this door features sturdy tie rod & welded corner construction.

The Competidor II is a basic door system which is available in bronze and clear anodized versions. It can be ordered with butts or pivots, with or without framing. The entrance comes as a basic 3'0" x 7'0" unit ready for 1/4" glazing or optional 1" glazing. To keep your costs as low as possible, the Competidor II requires some minimal assembly. RebcO will fabricate minor alterations to the door to meet your requirements.

When a high performance commercial door is required, consider ordering RebcO's standard narrow, medium or wide stile entrances.

Consider REBCO's other Entrance Door Options – Narrow, Medium, Wide Stile and ...

Bi-Folding Doors (Narrow Stile) on Butt Hinges

Multi-Fold Doors are manufactured with REBCO's triple hinge system, allowing up to 3 doors on each side to completely open. It is ideal for the fronts of stores, produce markets, auto dealerships and anywhere you need to create a wide opening.

FRP Entrances

The FRP Door is ideal for heavy traffic areas. Inside the scratch and stain resistant FRP face sheet is an aluminum subframe and foam core which enable the door to withstand constant abuse and deflect damaging accidental impact and vandalism. Extra sturdy adjustable pin & barrel hinges evenly distribute the door's weight over its length and contain a hinge guard for door edge protection. Our aluminum subframe includes a mid-rail for positive attachment of exit devices and security hardware, and our adjustable hinge allows up to 3/4" adjustment for hard-to-fit existing frames. At REBCO, bronze and clear finished doors are in stock for immediate delivery. Other finishes available upon request.

Showroom Entrances

REBCO showroom entrances are ideal for automobile dealership applications. They effectively use the REBCO narrow stile door system with custom glazing and hardware to achieve a dramatic yet functional entrance which is large enough to drive cars onto the showroom floor. Complete hardware and standard push/pull are included along with a 5" threshold. The doors are prepped for 1/4" glazing and include one 3'0" or 3'6" door and one 5'0" creating a wide opening.

At REBCO, we are always ready to assist you in solving your most unique problems!

Top Hung Bi-Folding Doors, Pacer 450 Series

When a larger opening is needed than our standard bi-fold doors will allow, the Pacer 450 can be used. The door units glide smoothly on our top edge roller system and are securely held in place with high strength pivots. For added safety and security, Pacer Series entrances feature a hook-bolt lock. Wire back-to-back pull handles are installed and the units are set up for 1/4" or 1" glazing.

Pacer 450 entrances feature narrow, medium or wide stile

folding and fixed panel configurations with the same rugged fully welded construction as our swing doors. In most cases, we can ship units prehung, ready to install, with little or no assembly, within our standard lead time.

Pacer 450 Series Top Hung Sliding Doors

Merchandise is clearly viewed, but secured behind the large expanse of glass in RebcO's manual straight sliding door system. With a top edge roller system and a bottom edge guide, these units may be used with or without a threshold.

Pacer Series 450 units are a perfect compliment to RebcO's standard flush glazed systems: both 2" x 4-1/2" Flush Glazed System for 1" glazing and 1-3/4" x 4-1/2" System for 1/4" glazing. They come in a variety of styles and configurations which can include the addition of transoms and swing doors. Custom sizes are our specialty, however, the standard 4 panel unit fits into a rough opening of 160" with a clear opening of 72".
